WPI; 2002-681656/73. N-PSDB; AAD45223. Novel human alpha-galactosidase polypeptide useful for treating lysosomal storage diseases

Claim 7; Page 44; 88pp; English.

The invention relates to human alpha-galactosidase truncated at the carboxy terminus and the production of enzymatically active recombinant human and animal lysosomal enzymes. The invention is useful for producing lysosomal enzymes for tracting lysosomal storage diseases, producing altered or mutated proteins, enzymatically active or otherwise, to serve as precursors or substrates for further in vivo or in vitro processing to

õ

õ

```
The invention relates to human alpha-galactosidase derivatives and the nucleic acids encoding them. The polypeptides are used in a method for producing active recombinant human and animal lysosomal enzymes in a plant expression system. The enzymes can be used in enzyme replacement therapy for the therapeutic treatment of human and animal lysosomal diseases. This sequence represents a human alpha-galactosidase derivative polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   recombinant human and animal system that can be used in enzyme

The methods and compositions of the present invention are useful for producing recombinant lysosomal enzymes for enzyme replacement therapy for treating human and animal lysosomal storage diseases such as Gaucher's disease, Niemann-Pick disease, Rabry disease and Tay-Sachs disease. The present sequence is human wild type rGAL-8 protein used in the exemplification of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to nucleotide encoding galactosidase (GAL). The invention is useful in gene therapy. The polynucleotides and polypeptides are useful in treating human and animal lysosomal storage diseases, e.g. Pabry's disease and Gaucher's diseases. The present sequence is human GAL protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gauchers disease; metabolic; neurological disease; niemann pick disease; genetic disorder; Fabry disease; metabolic disorder; tay sachs disease; antilipemic; cns-gen.; lysosome storage disease; alpha-galactosidase;
                                                                                                                                                                                                            The present invention relates to the production of human and animal lysosomal enzymes in plants by a transient plant expression system. The invention relates to glucocerebrosidase (GCB, GCR) and alpha-galactosidase enzymes having a post-translational modification provided by the plant expression system. The invention is useful in enzyme replacement therapy for treating lysosomal storage diseases such as Gaucher's disease, Niemann-Pick disease, Pabry's disease and Tay-Sachs disease, Hurler's syndrome and Hurler-Scheie syndrome. The invention is also useful in researches for developing new approaches to medical treatment of lysosomal storage diseases and in industrial processes involving enzymatic substrate hydrolysis. The present sequence is the human alpha-galactosidase protein.
pharmaceutical composition comprising a lysosomal enzyme, useful for nzyme replacement therapy for the treatment of lysosomal storage
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ADGYKHMSLALINRTGRSIVYSCEWPLYMWPFQKPNYTEIRQYCNHWRNFADIDDSWKSIK

The present invention relates to the production of human and animal lysosomal enzymes in plants by a transient plant expression system. The invention relates to glucocarebrosidase (GCB, GCR) and alpha-galactosidase (Gal) enzymes having a post-translational modification provided by the plant expression system. The invention is useful in enzyme replacement therapy for treating lysosomal storage diseases such as Gaucher's disease, Niemann-lick disease, Fabry's disease, Tay-Sachs disease, Hurler's syndrome and Hurler-Scheie syndrome. The invention is also useful in researches for developing new approaches to medical treatment of lysosomal storage diseases and in industrial processes involving enzymatic substrate hydrolysis. The present sequence is the human alpha-galactosidase protein. Note: The present sequence is the SEQ ID NO: 8 which is shown in page 36-38 of the specification. This sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                lysosonal enzymes in plants by a transient plant expression system. The invention relates to glucocerebrosidase (GCB, GCR) and alpha-galactosidase (Gal) enzymes having a post-translational modification provided by the plant expression system. The invention is useful in enzyme replacement therapy for traating lysosomal storage diseases such as Gaucher's disease, party's disease, Tay-Sachs disease, Hurler's syndrome and Hurler-Scheie syndrome. The invention is also useful in researches for developing new approaches to medical treatment of lysosomal storage diseases and in industrial processes involving enzymatic substrate hydrolysis. The present sequence is the human alpha-galactosidase protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    1 MOLRNPELHLGCALALRFLALVSWDIPGARALDNGLARTPTMGWLHWERFMCNLDCQEEP

```
lysosomal enzymes for treating lysosomal storage diseases, producing an attered or mutated proteins, enzymatically active or otherwise, to serve as precursors or substrates for further in vivo or in vitro processing to a specialised industrial form for research or therapeutic uses, to produce more effective therapeutic enzyme, for producing antibodies against lysosomal enzymes for medical disgnostic use, and in any sequence is human rGAL-8R protein
The invention is useful for producing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SILDWTSFNQERIVDVAGPGGWNDPDMLVIGNFGLSWNQQVTQMALWAIMAAPLFMSNDL 300

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ò
                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                  The invention relates to human alpha-galactosidase derivatives and the nucleic acids encoding them. The polypeptides are used in a method for producing active recombinant human and animal lysosomal enzymes in a plant expression system. The enzymes can be used in enzyme replacement therapy for the therapeutic treatment of human and animal lysosomal diseases. This sequence represents a human alpha-galactosidase derivative polypeptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                             120
                                                                                                                                                                                                                                                                                                                                                                                                                          180

```
The invention relates to nucleotide encoding galactosidase (GAL). The invention is useful in gene therapy. The polynucleotides and polypeptides are useful in treating human and animal lysosomal storage diseases, e.g. Pabry's disease and Gaucher's diseases. The present sequence is human GAL protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ANYVHSKGLKLGIYADVGNKTCAGFPGSFGYYDIDAQTFADWGVDLLKFDGCYCDSLENL 180

                                                                                                                                                                                                                                                                                                                                                                                                                                           enzymes for enzyme replacement therapy for treating human and animal lysosomal storage diseases such as Gaucher's disease, Niemann-Pick disease, Pabry disease and Tay-Sachs disease. The present sequence is human wild type rGAL-8R protein. This sequence comprises a human rGAL-8 protein and a ER retention signal. This sequence is used in the exemplification of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention relates to the production of human and animal lysosomal enzymes in plants by a transient plant expression system. The invention relates to glucocerebrosidase (GCB, GCR) and alpha-galactosidase (Gal) enzymes having a post-translational modification provided by the plant expression system. The invention is useful in enzyme replacement therapy for treating lysosomal storage diseases such as Gaucher's disease, Niemann-Pick disease, Fabry's disease, Tay-Sachs disease, Hurler's syndrome and Hurler-Scheie syndrome. The invention is treatment of lysosomal storage diseases and in industrial processes involving enzymatic substrate hydrolysis. The present sequence is the human alpha-galactosidase protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9
                                                                                                                                                                                                                                                                                  lysosonal enzymes in plants by a transient plant expression system. The invention relates to glucocerebrosidase (GCB, GCR) and alpha-
glaatcosidase enzymes having a post-translational modification provided by the plant expression system. The invention is useful in enzyme replacement therapy for treating lysosomal storage diseases such as Gaucher's disease, Niemann-Pick disease, Fabry's disease and Tay-Sachs disease, Hurler's syndrome. The invention is also useful in researches for developing new approaches to medical treatment of lysosomal storage diseases and in industrial processes involving enzymatic substrate hydrolysis. The present sequence is the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The cDNA sequence (AAQ66241) of human alpha-galactosidase A (alpha-Gal A) was determined. The predicted amino acid sequence (AAR53765) showed 50% homology with human alpha-N-acetylgalactosaminidase (AAR53766) (alpha-galactosidase B) and showed short regions of homology with yeast Mel 1 (AAR53767). Recombinant alpha-Gal A was produced in CHO cells. The enzyme can be used for Fabry disease enzyme replacement therapy, to convert blood group B to O, or to hydrolyze alpha-D-galactosyl residues from glycoconjugates. (Updated on 25-MAR-2003 to correct PN field.)

```
The amino acid sequence of the human alpha-galactosidase A (hAGA). The gane encodes a protein of 429 amino acids. Methods to overexpress and purify the protein include: (1) placing the 1.45 kb human hAGA gene fragment in a mammalian expression plasmid e.g. AAP91023 and purifying c fragment in a mammalian expression plasmid e.g. AAP91023 and purifying conformatography or (ii) by producing a fusion protein comprising hAGA c tused to easily purified protein sequences e.g. the Staphyloccus protein CC A, with cleavage site for a "housekeeping" gene e.g. collagenase cleavage site, inserted between the two sequences in a mammalian expression plasmid. The fusion protein can be easily purified by affinity colromatography and the galactosidase protein released from the fusion protein can be easily purified by affinity corrematography and the galactosidase protein released from the fusion protein can be used for enzyme replacement therapy in patients with the lysosomal storage disorder, Fabry diseases. The protein can also be used in vitro to modify alpha-D-galacto-glycoconjugates in a variety of processes e.g.
                                                                                                                   Recombinant human alpha-galactosidase A prodn. - using a mammalian host cell expression system to obtain high yields of enzymatically active
